R Markdown

This is an R Markdown document. Markdown is a simple formatting syntax for authoring HTML, PDF, and MS Word documents. For more details on using R Markdown see http://rmarkdown.rstudio.com.
When you click the **Knit** button a document will be generated that includes both content as well as the output of any embedded R code chunks within the document. You can embed an R code chunk like this:

```
summary(cars)
```

```
##      speed           dist
##  Min.   : 4.0   Min.   :  2.00
##  1st Qu.:12.0   1st Qu.: 26.00
##  Median :15.0   Median : 36.00
##  Mean   :15.4   Mean   : 42.98
##  3rd Qu.:19.0   3rd Qu.: 56.00
##  Max.   :25.0   Max.   :120.00
```

Including Plots

You can also embed plots, for example:

Note that the `echo = FALSE` parameter was added to the code chunk to prevent printing of the R code that generated the plot.

Including images not generated by code

Figure 1: The logo of the Department of English and American Studies

Just make sure that the image is in the right place relative to your `.Rmd` file. This means that you can have a subfolder within your main project folder dedicated to images, but the path would then be `./images/KAA.png`.

Including in-text citations

This template will use the standard pandoc Chicago author-date format for citations and references, so there is no need to include .csl metadata files.

Here is an example of how a text with in-text citations will actually look like.

Power law distributions can occur as a consequence of random drift Bentley, Hahn, and Shennan (2004, 1443).

This can be seen across a wide range of cultural traits Tauberg (2018).

You can find additional information about citations and bibliographies in R Markdown at this link.
